

# DUROLENZ

Durolenz are pioneers in doming technology with 32 years of stability, a broad capacity and a depth of experience that is industry proven.

## PRODUCTS / SERVICES

### INDUSTRIAL LABELLING:

Durability and Environmental Resistance: Industrial labels are designed to withstand harsh conditions, including exposure to chemicals, extreme temperatures, moisture, abrasion, and UV radiation. They are engineered to be durable, long-lasting, and resistant to fading, ensuring that vital information remains legible and intact over time.

### LASER CUTTING / ETCHING

Laser cutting / etching provides exceptional repeatable precision and detail, allowing for intricate designs, fine lines, and small text to be produced with high accuracy. This production method allows us to create a product from the most durable substrates.

### GRAPHIC DESIGN

Durolenz has a on site graphic design team capable of working to engineering drawings. Experienced in real life application and solutions. Making the most critical projects become a reality.

### DOMING

Domed labels have a broad usage in industrial, product identification and branding applications. They can be applied to various surfaces, including packaging, electronics, vehicles, appliances, equipment, and more.

The raised, glossy appearance of domed labels adds a visually appealing and tactile element to the product or item they are applied to due to its resistance of harsh environments, heat and hazardous environments.

### SAFETY & COMPLIANCE

Labels & plates are used to identify products, components, parts, and inventory in industrial settings. They can include information such as product names, serial numbers, barcodes, lot numbers, and manufacturing dates. Proper labeling enables efficient inventory management, quality control, and traceability throughout the supply chain.

### PRINTING

Ability to print on various substrates that are suited to specific environments and conditions. Excellent operational performance, image quality, speed and cost for small or large batch runs.

## KEY PARTNERS

## CAPABILITY

### Laser cutting upto 1680 x 2510 mm

Including Acrylic, Plastic, Leather, Paper, Textiles, Wood.

### Fully automated pneumatic resin / doming machines

Including encapsulating technology.

### State of the art UV stable printers

For use in the harshest environments utilising the largest colour spectrum machines.

### Data merging ability

Traceability technology utilising Barcodes, QR codes and NFC including use for ERP systems.

## QUALITY STANDARDS & ASSOCIATIONS
